Dear Mike,

Here's your paper, with the last half of it marked up with my suggested changes. As I mentioned when I spoke to you last, I heavily toned down the manned space flight references and tried to emphasize the unmanned probe aspects. I also penciled in several suggestions for changes and/or additions at several places.

I'll try to get a copy of Science's "Instructions for Contributors" to you soon. I assume that you'll be down here for semester break, and I'll plan on seeing you then if getting this thing finished - I think you're almost there. One more draft should do it.

Good luck on any remaining finals.

See you soon,

Jowell
