Ana Soto
McGraw-Hill Book Company, Inc.
New York, NY

Dear Ana:

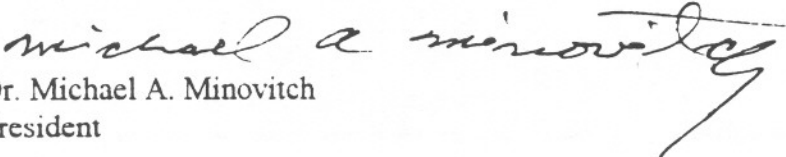

Here are the pages from the book entitled *Air Space And Instruments* that you requested for determining when the final version of the raw manuscript was received from the editor. (Sidney Lees, Dartmouth College) for publication.

As I indicated on the phone, we need to have this date for a historical project. Our best estimate is September 1962, but for accuracy we cannot guess at it. (A Library of Congress search found that the book had a publication date of March 22, 1963. See enclosure.)

Since the book is over 30 years old it might be hard for you to determine when the raw manuscript was received. Your computer data base may not go back that far. But by doing a little digging (such as searching through old letters of correspondence from authors and editors that might be in storage etc.), you might be able to track something down. Maybe you have other ideas. If you can do this in your spare time we will be willing to pay you \$300 for your effort. (Since we have to spend the project money anyway it makes no difference to us as long as the work is accurate and verifiable.)

We appreciate your help.

Sincerely yours,

Dr. Michael A. Minovitch
President
