2599 Glen Green
Hollywood, California 90068

Dear Richard,

Many thanks for your letter of the 25th last and the most interesting enclosures. I think it a splendid idea to pursue further the origin of gravity propulsion and encourage you to organize additional papers. Would Battin want to participate, for example? I thought the Minovich letter was splendid and properly edited could make an excellent paper. Would he want to present a paper in person? It would be nice to have something further by Montreal to tie into your joint paper and the EMPIRE paper given by me at Dresden. Or at least by Washington in 1992. Any other thoughts for Montreal? Abstracts are due fairly soon.

At about the same time I received your letter I got one from my old friend Harry Ruppe who lives and works in Munich-- formerly with the von Braun team in Huntsville. He said he had tried to reach you by merely writing to Mr. Dowling, Hollywood, but the letter was returned. So I forward it to you today and ask that you get in touch with him at the Technische Universität München. Interesting to think of gravity propulsion in terms of cometary orbits and the influence of the planets on them.

Maruja and I enjoyed the sweet picture of Cathy. Our best to her, Kristan and you,

Sincerely,

Please Reply To:
